

Let us show you why leading shipbuilders* choose all-electric tube benders from Horn Machine Tools for advanced tube fabrication.

Reasons include:

- The ability to bend demanding shapes with 'instant, no-scrap, set-up' thanks to intelligent software and precision all-electric control of all the machine's axis.
- Absolute bending precision thanks to online laser measurement and correction of bend angle (auto corrects for material 'spring-back' errors, and learns)
- Auto set-up – the system will automatically load part data from the network, eliminating operator error.
- Environmentally friendly: massive energy savings compared with hydraulic machinery, no waste, and minimal noise.
- Built-in intelligence reduces the requirement for a highly trained operator, dramatically increasing overall efficiency.

The time savings from faster machine set up, and scrap reduction means that all-electric machines can repay their investment easily on one project alone
