Shopping for Efficiency and Productivity?

Try UNISON – ALL Electric Benders!

A major US shopping cart manufacturer with facilities in Oklahoma and Virginia has employed four UNISON twin head benders to produce thousands of carts a day for large customers such as Walmart.

The ALL Electric twin head benders are fully automated with automatic loaders and can form 10 bend parts in less than 15 seconds. The robotic welding of the carts demand accuracy and repeatability of the bent tube shapes. This combined with the rigorous production schedule of twenty hours per day, six days a week, makes UNISON the perfect performance solution.

Let us show you how a UNISON ALL Electric bender will benefit your bottom line!
