Horn Metric Long Bed Tube Benders

Long Beds Are Perfect For Hand Rail Fabrication!!

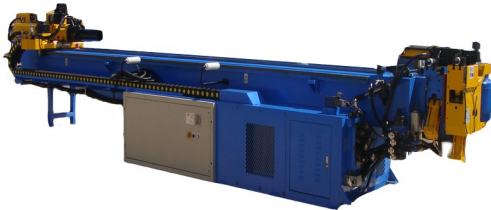

CNC80TBRE

- Fully automated CNC bender w/ dual stack tooling
- Capable of "push rolling" on top stack for large radius bends. Ideal for making coil or spirals
- 20' Length over mandrel perfect for making long parts like hand rails

CNC80TSR

- Fully automated CNC bender w/ single stack tooling
- Available w/ US #2 Tooling setup
- For pipe or tube bending
- 20' Length over mandrel perfect for making long parts like hand rails

A75TNC-PB-L

- A heavy duty Pipe Bender / Tube-Bender offering near CNC bending performance - *at a much lower cost!*
- Left-hand (CCW rotation) with HMT / Pines #2 tooling setup
- Distance between bend mechanical stops for positioning along the "Y" axis. This bender has a bed length of 17.7' LOM.

Horn Metric Long Bed Tube Benders

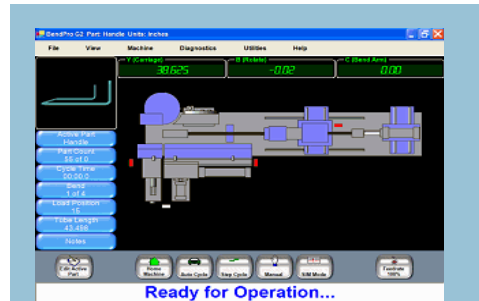

It's As Easy as 1, 2, 3!!

Spiral Steel Handrail Forming

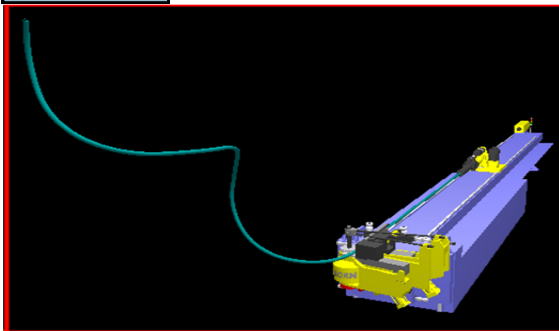

STEP 1.

Design and program spiral handrail shapes on your bender control or desktop software.

STEP 2.

Then simulate it on the computer before forming on the machine to save scrap material.

STEP 3.

Form the spiral handrail complete or a section at a time on the HMT CNC bender...

.....And Install The Rail!!

Its as easy as 1, 2 3!!

BendPro G2 Software

HMT offers the BendPro CNC control system on all of our new and rebuilt tube benders. This system has become the market leader in bend controls over the last decade.

The system offers the flexibility to adapt to almost any tube bending machine or application. The software is easy to use easy to program and efficiently checks for flaws before allowing it to run.
