Re: HMT #8 Tube Bender

Horn Machine Tools, Inc. of Madera, California has announced the completion of a new large diameter semi-automatic booster style tube bender, the **HMT #8**. This machine was designed and built for a large government contractor for hot bending large diameter heavy wall elbows on tight radius. The machine features a proportional inline boost system capable of producing over 150,000 lbs of force which is controlled by a Allen-Bradley PLC and touch screen operator interface. The machine ratings go up to 10" tubing or 8" Schedule 80 pipe. Planned applications are for traditional pipe bending, thin wall large OD tight radius bending and thick wall booster bending.
